

QuickPole Series 5

Cable Retrofit Instructions

Although you can buy a wired boom off the shelf at Ambient, it is also possible to retrofit your "normal" boom with cables. For this you need one of our cable kits, where you can choose between **coiled and straight cable** and **mono or stereo connectors**. For the coiled cable variant, you also have the option between an **angled or straight cable outlet**. Depending on the model of your QuickPole Series 5 boom, the length of the delivered cable varies.

Please note: the following instructions and video tutorial were created for the angled cable outlet. For the straight cable outlet, however, it works very similarly.

Video Tutorial

You'll find a video tutorial on how to retrofit QuickPole Series 5 boom with a coiled or straight cable scanning this QR code, using the link or browse our YouTube Channel.

QuickPole Series 5

Components of a Coiled Cable Kit

- Audio Cable XLR to Mini-XLR (5-Pin Stereo or 3-Pin Mono)
- Screw-on cable end piece (straight or angled outlet)

Components of a Straight Cable Kit

- Audio Cable XLR to Mini-XLR (5-Pin Stereo or 3-Pin Mono)
- Adapter XLR to Mini-XLR (5-Pin Stereo or 3-Pin Mono)
- Screw-on cable end piece

Needed Accessories

To perform the cable retrofit, you'll need additional tools:

- TORX10 Screwdriver
- Spanner

QuickPole Series 5

General Advice

Ensure long-lasting cables

As the tubes move when they are opened and closed, the cable can twist. In extreme cases, the cable may break after some time. So, it makes sense to open the thread at the bottom at regular intervals and let the cable swing out.

QuickPole Maintenance Kit

Boompoles are mechanical devices that require regular maintenance. We recommend using the Ambient QuickPole Maintenance Kit as soon as the boom can no longer be extended as smoothly as you are used to.

Regular Care

It also helps cleaning the surface of the fully extended boom with rubbing alcohol every few months. Afterwards, rub the surface with aromatic polishing oil - this prevents the formation of odors.

Booming in the rain?

If you have worked with boompole in the rain, you should take it apart completely afterwards and let the five segments dry separately. Otherwise, they will eventually start to smell.

Booming in the desert?

If sand or other small particles have entered your boompole, be sure to perform a complete cleaning (see video tutorials).

Repairing or renewing Segments

If a segment gets damaged, Ambient can supply a spare segment ready for fitting.

Replacing Velcro Felt or Spacer Tape

If you do not want to use our repair kit but want to purchase Velcro Felt and Spacer Tape yourself, please note: When applying the felt ring, a small expansion gap (2mm) should be left. Never overlap the felt.
